

Basic video editing on the Media Server

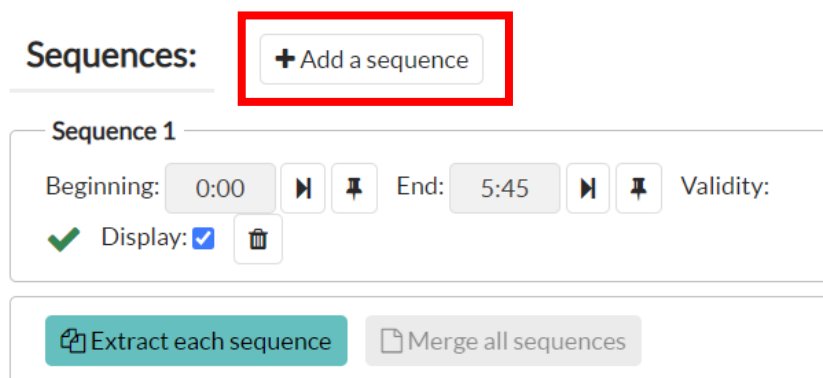

Step 1 – In your channel on the Media Server, roll over the video and click *Edit*

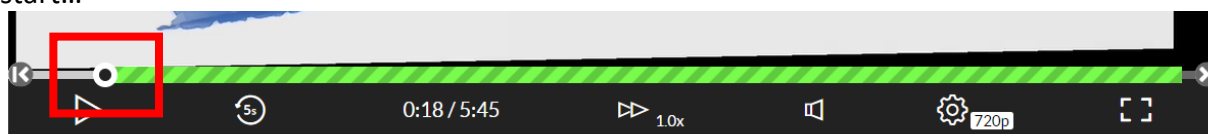

Step 2 – Click *Trimming* to access the editing features.

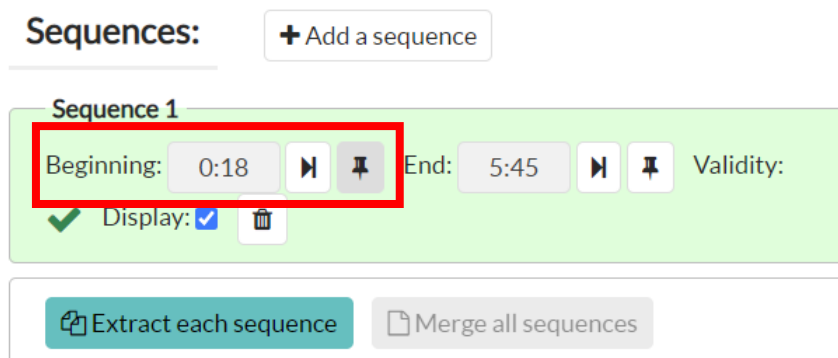

Step 3 – Click *Add a sequence*

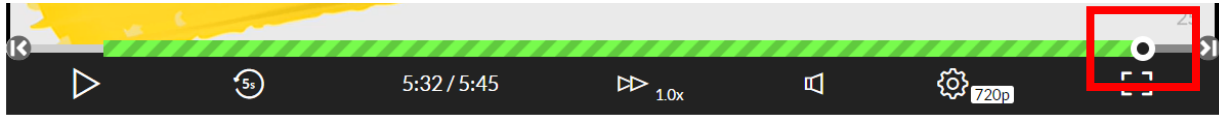

Step 4 – Scroll the play head along the video timeline to the point you want your video to start...

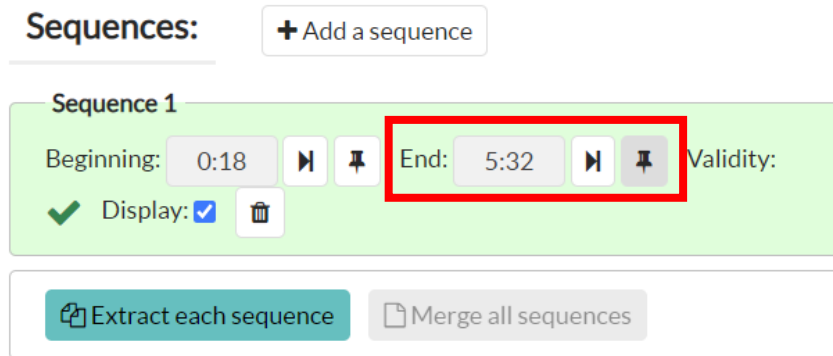

...and click the *Beginning* pin in the sequence to mark the starting point of your video.

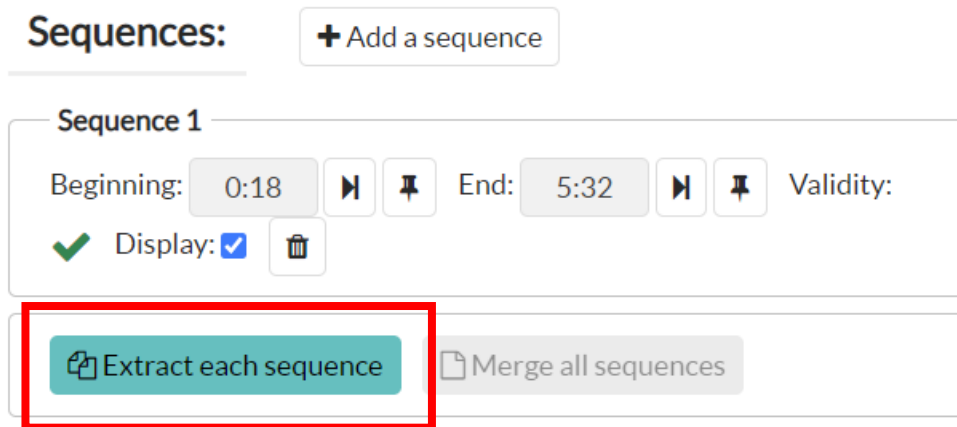

Step 5 – Scroll the play head along the video timeline to the point you want your video to finish...

... and click the *End* pin in the sequence to mark the finishing point of your video.

Step 6 – Click *Extract each sequence* to create an edited video based on the *Beginning* and *End* points you specified in the previous steps.

Step 7 – The edited video will begin processing, when complete it will appear in your Media Server channel with (trimmed) appended to the title. The original video remains untouched.
